"Perhaps the greatest drawback to Kentucky today is the lack of a good state road system." said Mr. Terstege in telling of the enced of a statewide automobile association. "Such a system canmot be obtained by talking about it. Experience in the past has shown that unless there is an organized body, representative of the whole state to guide and back a state road program, it will not work out satisfactorily.

You want a Battery that fits

"You're right. You can't put a short, fat battery into a long slim box in your car. Then you want a battery with terminals that will shake hands like old acquaintances with your car's wiring terminals.

"But the main thing is to give you a battery with the right capacity to work in harmony with your car's electrical system. Your cutting-in-speed counts - that's the speed at which your generator begins to do business— and the number of amperes it feeds into the battery. Those are just some of the conditions your battery must work under. What it all means is that you want a battery of the right capa city to digest the current fed into it and to handle its work without strain.

'We have EXIDE batteries in all sizes and type to replace batteries of all makes. But we won't sell a battery if your old one is repairable. No matter what its make, if its plates are still sound enough, we'll rejuvenate and guarantee it."

If your battery needs recharging, phone 428—we call for and deliver your batery. We also have rental batteries for use while yours are being recharaged or repaired.
